

Club Z! Tutoring of Pittsburgh Quick Tip Series

How can you help make learning fun for your student?

Here are a few quick tips to help. For more information, please visit our blog at clubztutoring.com/pittsburgh/blog/ for more tips about this subject and others.

Play Games!

Games that build memory, vocabulary, logic, and math skills are extremely helpful to learning and building brainpower while having fun and spending quality time together. Card games, matching or memorizing cards, counting games, etc are all great at building a foundation of learning through play. Pick games that are age and subject appropriate and have fun!

Look for Movies or TV Programs to Reinforce!

Finding programs that match what your student is learning in school helps to reinforce and present the material in a different way. History or science programs, dramatizations of literature, or even comics that exaggerate the topic are all fun ways to learn together.

Take it beyond the Book and the Classroom!

The best way to learn information is to use it or make something with it. Make a graphic organizer or chart, create a timeline, make a video recording of a silly song or newscast, play school with your student as your teacher, take math into the kitchen. These are all ways to help remember the material in a way that makes memories that last longer.
